

## PEACHCROFT ORTHODONTICS

DR. ROSEMARY GARTON

ORTHODONTIC SPECIALIST

FOR THE ENTIRE FAMILY

**Dr. Rosemary Garton** (GDC # 60925)  
BDS(Lond) LDSRCS(Eng) MDSC(Orth)[Sydney]

Rosemary qualified as a dentist in 1985 from Kings College, London and practiced for 7 years in the UK, before leaving for Australia. By 1997, Rosemary had completed her orthodontic post graduate qualification and then worked in private practice until returning to the UK in 1999. Since then, Rosemary worked as an associate orthodontist in Oxfordshire until October 2007 when she took over as owner and principal orthodontic specialist at the orthodontic practice at Peachcroft Shopping Centre.

Our practice is located about 5 miles south of Oxford, and is easily accessible from the A34. There is plenty of free car parking in the Peachcroft Shopping Centre, and we are located above Lloyd's Chemist.

**Irina Coward** (GDC # 129582)

Irina qualified as an Orthodontic therapist from Warwick University in 2011, and joined Peachcroft Orthodontics in January 2012, where she has become a valued member of a professional team of specialists who work tirelessly to improve patients' smiles and lives.

*Making Better Smiles*

## YOUR FIRST VISIT

We look forward to meeting you on your first visit to our office. During this time, we will help you get acquainted with our office and learn about your orthodontic treatment. We understand that each patient's orthodontic treatment is different, and we promise to give you the personal attention you deserve.

Your first orthodontic visit will consist of an examination and discussion of potential treatment options. This examination might include taking impressions of the teeth, together with some X-rays. This important visit will address your orthodontic needs to determine if this is the proper time to begin treatment and a report will be sent to your dentist for his information.

We will provide a complete clinical diagnosis regarding the nature of the problem, goals and estimated fees, if private treatment is required. We encourage questions from both the patient and the parent to alleviate any concerns you might have.

## WHAT IS ORTHODONTICS

Orthodontics is concerned with the re-alignment of the teeth and jaws to improve their function and the appearance of the face and teeth.

Though an orthodontist can enhance a smile at any age, there is an optimal time period to begin treatment. Beginning treatment at this time ensures the greatest result in the least amount of time.

Orthodontics is more successful when started during the active growth phase, before 15 years of age. Our practice prefers to see patients as early as possible and ideally, between 8 and 10 years of age for the first consultation.

Some of the most direct results of interceptive treatment are:

- Creating room for crowded, erupting teeth
- Creating facial symmetry through influencing jaw growth
- Reducing the risk of trauma to protruding front teeth
- Preserving space for unerupted teeth
- Reducing the need for tooth removal
- Reducing treatment time with braces

**Successful treatment can only occur with your enthusiasm and with the help and support of your family.**

## ADULT TREATMENT

Braces aren't just for kids anymore. Tooth alignment can be changed at any age if your gums and bone structure are healthy. We offer a variety of treatments that are designed for different age groups – including adults. A new smile can begin today.

Orthodontic treatment at later stages in life can dramatically improve your personal appearance and self-esteem. Improving the health of your teeth and gums is equally important. Crooked teeth and a bad bite can contribute to gum and bone loss, tooth decay, abnormal wear of the tooth enamel and surfaces.

**Good news!** The new techniques and appliances we use greatly reduce discomfort levels, decrease the frequency of visits, shorten treatment time and may allow you to choose from several options. Your options may include metal braces, translucent braces or transparent aligners that can be worn to improve mild cases of misaligned teeth.

A growing proportion of patients are adults, and they agree that it's never too late to improve their greatest asset - their smile.

If you have a complaint regarding your treatment please contact the surgery.
